Case Study Assignment

Name:- Himanshi Jambhulkar

Roll no:-FWD-54 (EE-A-13)

Reg no:-24070454

Course name:-Dynamic Wed Programming

Topic:- Case Study on the Pexels Recommendation Feed Interface

1. Introduction

Pexels is a popular website that provides free stock photos and videos for designers, students, and creators. The platform allows users to search for images using keywords and explore recommended photos related to their search query. The recommendation feed helps users quickly discover relevant images in an organized layout.

2. Objective

The objective of this case study is to analyze the recommendation feed interface of the Pexels website and recreate a similar webpage layout using HTML and CSS.

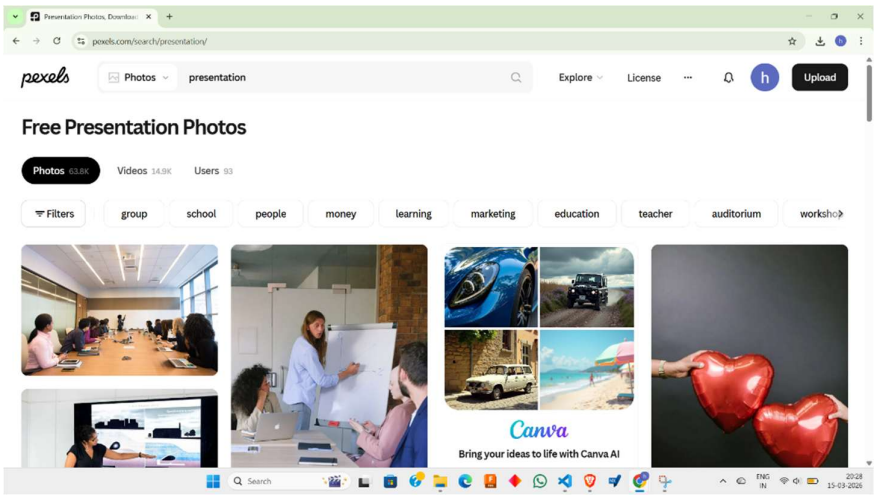
3. Website Reference

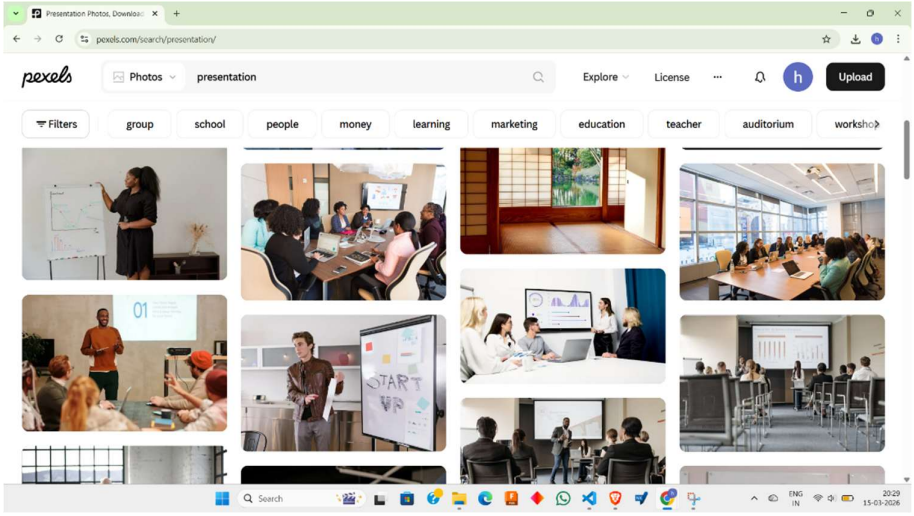
https://www.pexels.com/search/presentation/

4. Selected Interface

Pexels Presentation Photo Recommendation Feed

5. Reference Interface Image





6. Features of the Recommendation Feed

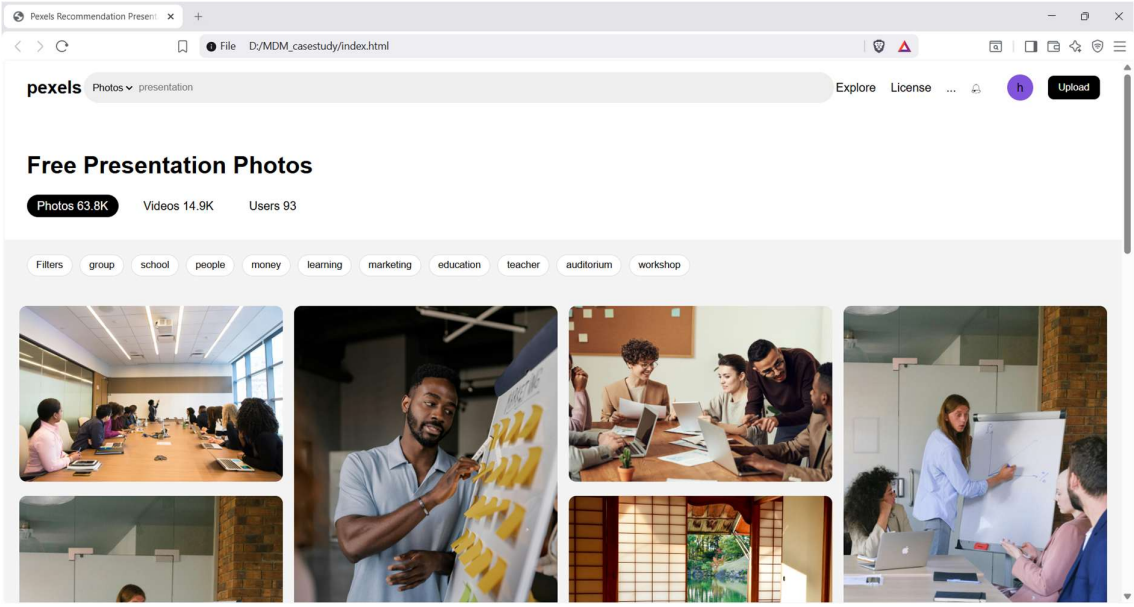
The recommendation feed interface includes the following elements:

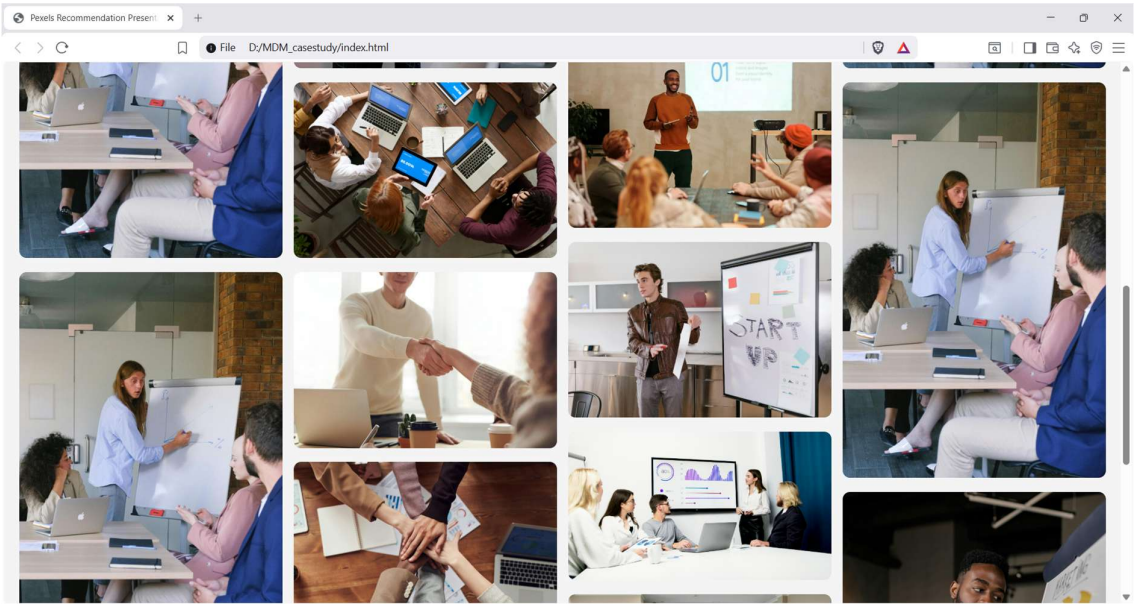
- Header section with logo and search bar
- Navigation menu options such as Explore and License
- Upload button for users
- Category tabs such as Photos, Videos, and Users
- Filter buttons to refine search results
- Image cards displayed in a grid layout
- Hover effect on images

7. Tools and Technologies Used

- HTML
- CSS
- Visual Studio Code
- Web Browser

9. Output





10. Conclusion

This case study helped in understanding how modern websites display recommended content using grid layouts. It also improved practical knowledge of HTML and CSS for designing responsive and visually organized web interfaces.
